SUMMARY

Final-year B.Tech CSE (AI Specialization) student with hands-on experience building LLM-integrated applications, RAG pipelines, and automation systems on Linux. Proficient in Python, FastAPI, HuggingFace, prompt engineering, vector databases, and Docker. Shipped 4 real-world AI projects including a Gemini 1.5 Flash Android agent and a RAG-based document Q&A system with sub-2s latency.

TECHNICAL SKILLS

Languages	Python (primary), C, Rust, Bash, JavaScript
AI / GenAI	HuggingFace, LangChain, RAG, FAISS, ChromaDB, Prompt Engineering, Gemini API
Backend	FastAPI, Flask, REST APIs, Google Drive API
DevOps	Docker, Linux (Parrot OS / Ubuntu), Git, Bash scripting, systemd
ML / CV	OpenCV, MediaPipe, scikit-learn, PyAutoGUI, Selenium, BeautifulSoup
Databases	FAISS, ChromaDB, SQLite, Vector Store design

PROJECTS

ScreenAI — LLM-Powered Android Screen Agent Python · Gemini 1.5 Flash · Kotlin · Jetpack Compose · MediaProjection API • Engineered an Android overlay routing live screen context to Gemini 1.5 Flash via REST API, delivering real-time AI insights with avg. response latency under 1.8s through async request batching. • Built multilingual prompt templates (Hindi/English) and a structured prompt engineering pipeline, improving response accuracy by ~40% over naive prompting — directly applicable to multilingual GenAI systems.	Jan–Apr 2025
RAG Document Q&A; Pipeline Python · LangChain · FAISS · HuggingFace Transformers · FastAPI • Built a Retrieval-Augmented Generation system over 50+ page documents using FAISS vector store and HuggingFace sentence-transformers, served via FastAPI endpoint with sub-2s latency. • Improved answer relevance from 61% to 83% through systematic chunk-size and top-k retrieval tuning; implemented source-grounded response formatting to reduce hallucination.	Mar–May 2025
Gesture-Controlled PC with Anomaly Detection Python · OpenCV · MediaPipe · FastAPI · SHA-256 hashing • Achieved 94% gesture classification accuracy across 12 classes using MediaPipe + OpenCV; exposed controls via FastAPI REST interface enabling remote AI-driven command triggering. • Implemented SHA-256 gesture authentication and anomaly detection logger generating structured JSON incident reports — lightweight EDR-style AI monitoring pipeline.	Aug–Dec 2024
AKTU PYQ Extractor — Intelligent CLI Retrieval Tool Python · Google Drive API · fuzzywuzzy · Bash · Linux • Reduced paper retrieval time from ~20 min to under 30s using fuzzy subject-name matching (90%+ accuracy) and Google Drive API; deployed on Linux with a one-command Bash wrapper.	Nov 2024–Jan 2025

EDUCATION

B.Tech, Computer Science Engineering — AI Specialization IIMT College of Engineering, Greater Noida AKTU • Relevant coursework: Machine Learning Techniques, Artificial Intelligence, Computer Networks, Data Structures & Algorithms, Programming for Problem Solving.	2023 – 2027
--	-------------

CERTIFICATIONS

• HuggingFace NLP Course — Completed	• LangChain & Vector Databases — Completed	• Docker for Developers — Completed	• eJPT (INE) — In Progress
--------------------------------------	--	-------------------------------------	----------------------------

ACHIEVEMENTS & ADDITIONAL

- Built and shipped 4 end-to-end AI projects independently as a pre-final year student, covering the full stack: data ingestion, LLM integration, API layer, and Linux deployment.
- Active Linux power user (Parrot OS daily driver) — comfortable with sysfs, systemd, process management, dual-boot setup, and CLI tooling; zero hand-holding needed on dev environment.
- Exploring contribution to open-source HuggingFace and LangChain repositories; maintaining public project repos on GitHub with documented READMEs.
- Languages: English (professional proficiency), Hindi (native).
