EDUCATION

IIMT College of Engineering (AKTU)

B.Tech in Computer Science and Engineering – AI Specialization

Sep. 2023 – May 2027

Greater Noida, India

RELEVANT COURSEWORK

Machine Learning • Data Structures • Artificial Intelligence • Database Management • Computer Networks

AGENTIC AI & ML PROJECTS

Hexstrike AI – MCP Pentesting Server | *Python, Flask, MCP, Claude API*

- Built an agentic AI server exposing 150+ penetration-testing tools to LLM clients via the Model Context Protocol (MCP), enabling Claude to autonomously select and chain security tools.
- Integrated the server with VS Code and Claude Desktop over stdio transport, allowing an LLM agent to plan and execute multi-step recon and exploitation workflows.
- Designed the Flask backend to route tool calls, manage tool schemas, and return structured results back to the agent loop.

Multi-Agent Pipeline Architecture | *n8n, CrewAI, AWS Bedrock, Claude*

- Configured AWS Bedrock access with Claude Code to prototype agentic workflows on managed infrastructure.
- Explored multi-agent orchestration patterns using n8n and CrewAI, evaluating role-based agent delegation and tool-calling pipelines for automation tasks.

Bhagavad Gita RAG Pipeline | *Python, Qdrant, Sentence-Transformers, Claude API*

- Built a retrieval-augmented generation pipeline over Qdrant vector database using sentence-transformer embeddings for semantic search over scripture text.
- Implemented a safety gate to detect user distress signals in queries and route responses accordingly before passing to the Claude API for generation.

ScreenAI – On-Device Screen Assistant | *Kotlin, Jetpack Compose, Gemini 1.5 Flash*

- Developed an Android floating-overlay assistant using MediaProjection to capture live screen content and Gemini 1.5 Flash for real-time multimodal analysis.
- Built the UI in Jetpack Compose and debugged platform-level constraints, including an unresolved MIUI background-process-kill issue.

ResultIQ – AKTU Result Scraper | *Python, Flask, BeautifulSoup, ThreadPoolExecutor*

- Engineered a Flask backend that bypasses ASP.NET postback authentication to automate batch retrieval of university results at scale using `ThreadPoolExecutor`.
- Built a dark-themed frontend with PDF export and batch ZIP download for processed result sets.

ADDITIONAL PROJECTS

MetaClean | *JavaScript, IndexedDB, Canvas API, PWA*

- Client-side EXIF/GPS metadata scrubber PWA, deployed at manish8171.github.io/metadata-cleaner.

CausalFunnel Analytics Platform | *Node.js, Express, MongoDB, Next.js*

- Full-stack analytics platform with a client-side tracker and a Next.js dashboard.

TECHNICAL SKILLS

Languages: Python, Java, C, Rust, Bash, JavaScript, Kotlin

AI/Agentic Tooling: Claude API, Claude Code, MCP, AWS Bedrock, CrewAI, n8n, RAG, Qdrant, Sentence-Transformers

Frameworks/Tools: Flask, Next.js, Node.js, Jetpack Compose, JUnit, Git

Platforms: Linux (Parrot OS), Android, Google Cloud Platform

CERTIFICATIONS

Deloitte Australia – Cyber Job Simulation (Forage)

EY / Microsoft – AI Skills Passport
